THE PRODUCT

Utah Smart Blinds offers an innovative window covering solution. Our blinds are equipped with technology that enables automated control and customization of light and privacy levels in any space. Utilizing a combination of sensors, connectivity, and programmable settings, these blinds can be operated via remote, voice commands, or a home automation system. They offer convenience by allowing users to adjust blind position based on daylight intensity, sync with other smart devices for integrated functionality, and more. Their intelligent features and sleek design provides an effortless and stylish solution for managing light, privacy, and ambiance in any home or office setting.

Our smart blinds operate via a rechargeable battery system powered by a solar cell alongside an AC plug backup, offering enhanced sustainability and reliability. The rechargeable battery harnesses solar energy during the day, storing it for use when needed. This reduces the reliance on traditional power sources and minimizes environmental impact. In the case of shading or lack of available solar energy, the AC backup source ensures continuous functionality. This dual-power setup not only maximizes energy efficiency but also provides peace of mind, ensuring that the blinds remain operational regardless of external factors.

Our suite of smart blinds includes multiple options: translucent blinds that gently filter sunlight, blackout blinds for more light control and zebra blinds for a unique blend of privacy and visibility. With a variety of material and color choices available, users can personalize their smart blinds to complement their interior decor and achieve their desired aesthetic.
